

Linux Class 4 - Practice Task

Practice of echo, cat options and more vi editor commands

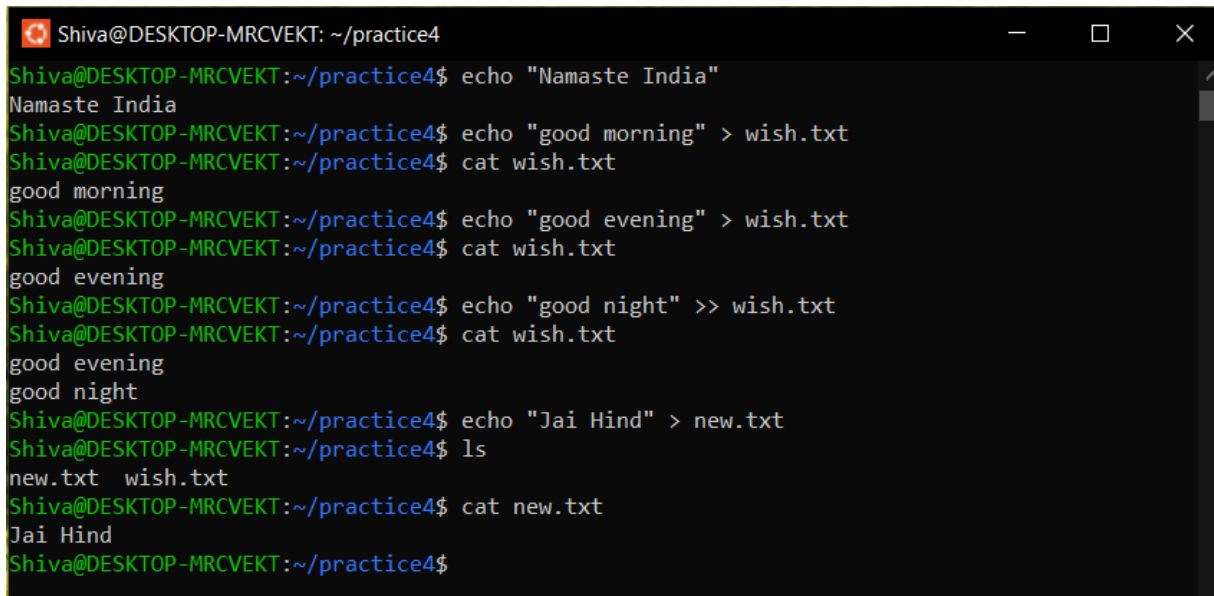

Submitted by: Shivakumar Muradi

Date: 25 September 2026

This is my practice for class 4. I made a folder practice4 and did the echo and cat commands first, and then the new vi commands.

echo - with > and >>

```
echo "Namaste India"
echo "good morning" > wish.txt
cat wish.txt
echo "good evening" > wish.txt
cat wish.txt
echo "good night" >> wish.txt
cat wish.txt
echo "Jai Hind" > new.txt
ls
cat new.txt
```

A screenshot of a terminal window titled 'Shiva@DESKTOP-MRCVEKT: ~/practice4'. The terminal shows a series of commands and their outputs. The commands are: 'echo "Namaste India"', 'echo "good morning" > wish.txt', 'cat wish.txt', 'echo "good evening" > wish.txt', 'cat wish.txt', 'echo "good night" >> wish.txt', 'cat wish.txt', 'echo "Jai Hind" > new.txt', 'ls', and 'cat new.txt'. The outputs are: 'Namaste India', 'good morning', 'good evening', 'good evening', 'good night', 'Jai Hind', and 'new.txt wish.txt'. The terminal window has standard Linux window controls (minimize, maximize, close) in the top right corner.

Screenshot 1: echo on the screen, echo with > and echo with >>.

echo alone just printed Namaste India on the screen.

With one > it goes into the file instead of the screen. When I did it a second time with good evening, cat showed only good evening. good morning was gone. So one > replaces the full content.

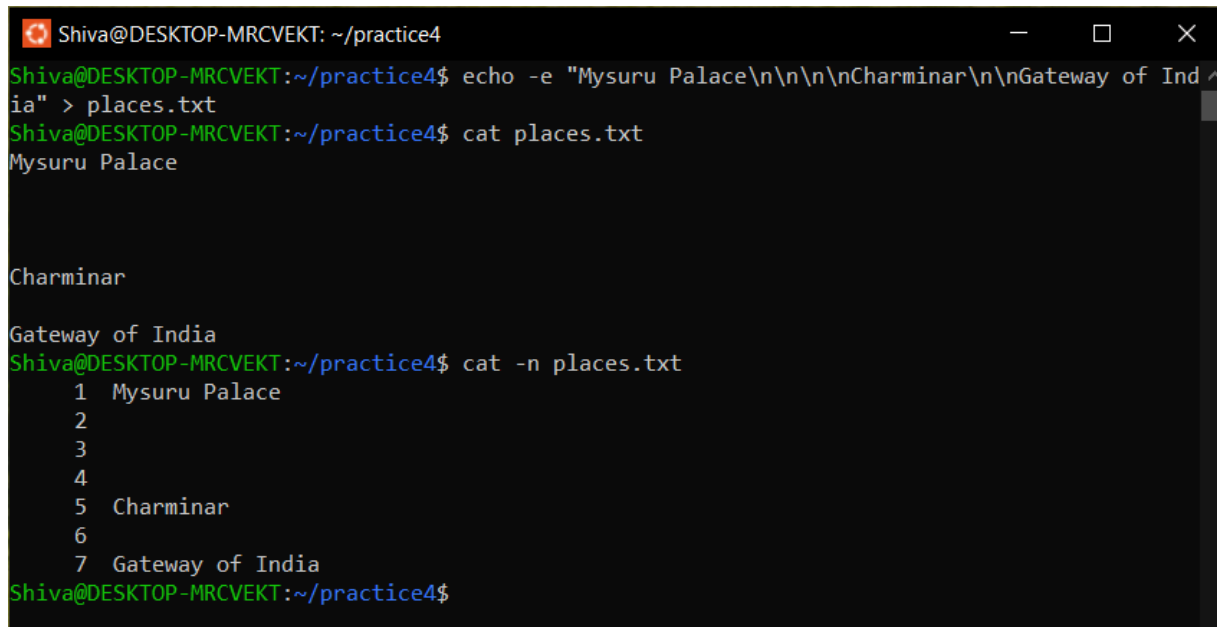

With two >> it adds at the end. After that the file had good evening and good night, both.

new.txt was not there before. echo with > made the file by itself and put Jai Hind inside. ls shows it.

cat and its options

For the cat options I need a file with empty lines in between. I used echo -e, where \n means a new line, so 3 \n together give empty lines. I used famous places of India.

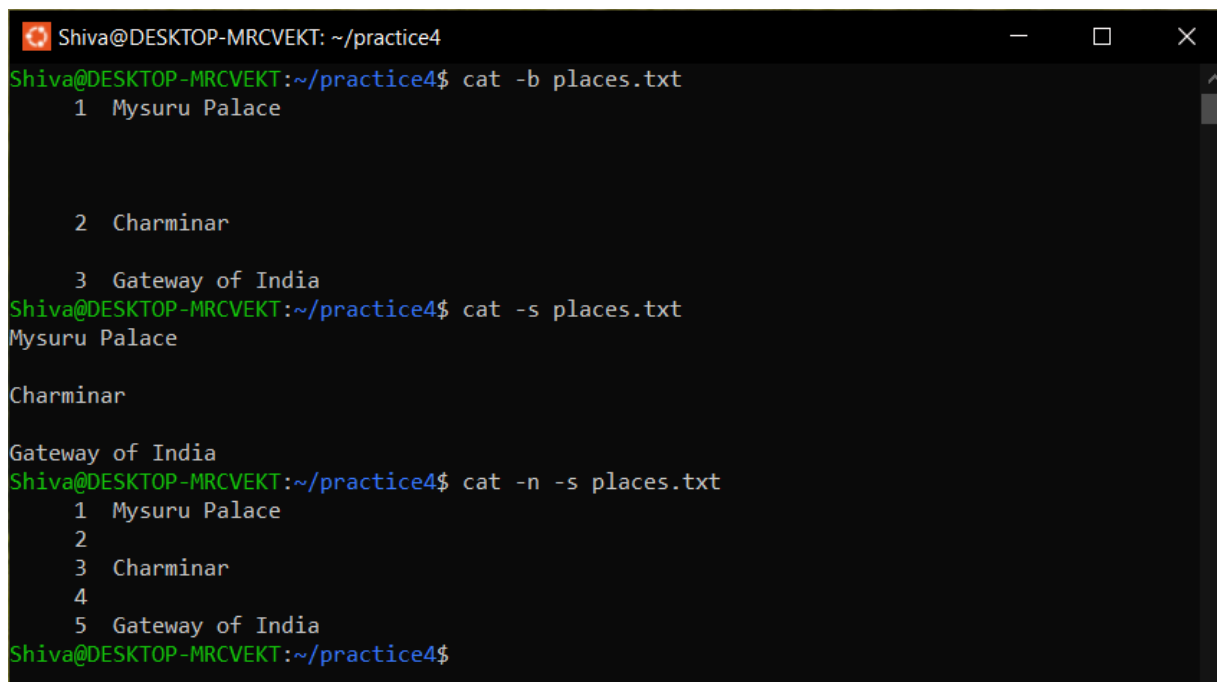

```
echo -e "Mysuru Palace\n\n\n\nCharminar\n\n\nGateway of India" > places.txt  
cat places.txt  
cat -n places.txt
```

```
Shiva@DESKTOP-MRCVEKT: ~/practice4  
Shiva@DESKTOP-MRCVEKT:~/practice4$ echo -e "Mysuru Palace\n\n\n\nCharminar\n\n\nGateway of India" > places.txt  
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat places.txt  
Mysuru Palace  
  
  
  
Charminar  
  
  
Gateway of India  
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat -n places.txt  
 1 Mysuru Palace  
 2  
 3  
 4  
 5 Charminar  
 6  
 7 Gateway of India  
Shiva@DESKTOP-MRCVEKT:~/practice4$
```

Screenshot 2: the file with empty lines, and cat -n.

```
cat -b places.txt  
cat -s places.txt  
cat -n -s places.txt
```

```
Shiva@DESKTOP-MRCVEKT: ~/practice4  
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat -b places.txt  
 1 Mysuru Palace  
  
  
  
 2 Charminar  
  
  
 3 Gateway of India  
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat -s places.txt  
Mysuru Palace  
  
Charminar  
  
Gateway of India  
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat -n -s places.txt  
 1 Mysuru Palace  
 2  
 3 Charminar  
 4  
 5 Gateway of India  
Shiva@DESKTOP-MRCVEKT:~/practice4$
```

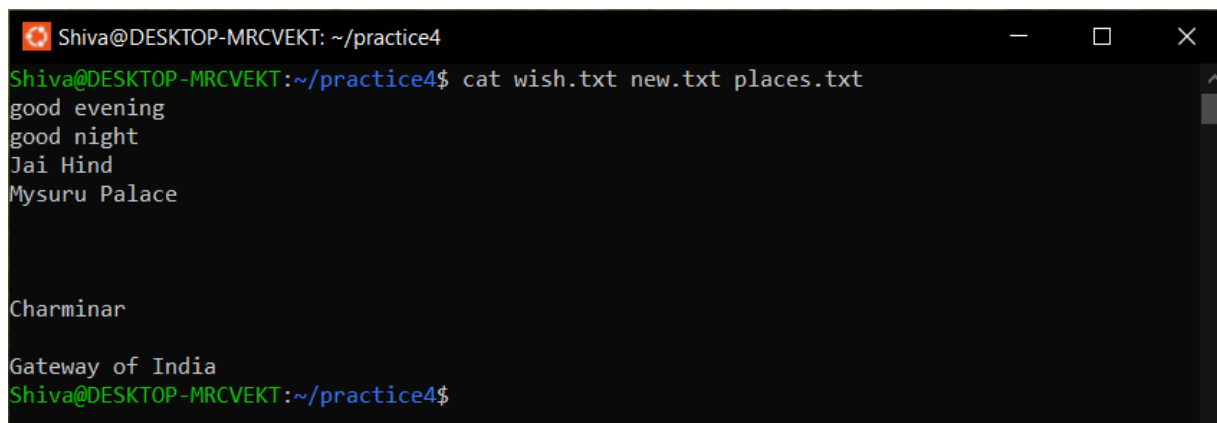

Screenshot 3: cat -b, cat -s and cat -n -s.

Command	What it did on places.txt
cat places.txt	Shows the file as it is, with all the empty lines
cat -n places.txt	Numbers every line, empty lines also (1 to 7)
cat -b places.txt	Numbers only the lines with text (1 to 3)
cat -s places.txt	Many empty lines together become only one
cat -n -s places.txt	Squeezes the empty lines and then numbers (1 to 5)

I liked cat -s. It does not delete empty lines fully, it keeps one empty line between the places, so it still looks neat.

cat with many files

```
cat wish.txt new.txt places.txt
```

```

Shiva@DESKTOP-MRCVEKT: ~/practice4
Shiva@DESKTOP-MRCVEKT:~/practice4$ cat wish.txt new.txt places.txt
good evening
good night
Jai Hind
Mysuru Palace

Charminar

Gateway of India
Shiva@DESKTOP-MRCVEKT:~/practice4$

```

Screenshot 4: three files shown one after another.

cat showed wish.txt, then new.txt, then places.txt, one after the other, like one big file. The files themselves did not change.

vi editor - o, O, x and replace everywhere

I made a small file greet.txt with 3 lines using echo. In the first line I made a spelling mistake on purpose (morningg) so that I can fix it with x.

```
echo "good morningg sir" > greet.txt
echo "good afternoon madam" >> greet.txt
echo "good night all" >> greet.txt
vi greet.txt
:set nu
```

[illegible]

Screenshot 5: the file in vi before the changes.

Then in command mode I did this:

- On line 1, I moved the cursor to the extra g and pressed x. x deletes the one character under the cursor. Now it is good morning.
- Still on line 1, I pressed o. It made a new empty line below line 1 and went to insert mode. I came back to command mode.
- Then G to go to the last line, and capital O. It made a new empty line above the last line.

% means all the lines of the file, so I don't need to give line numbers like 1,5. vi says 3 substitutions on 3 lines at the bottom. Then I saved with :wq.
